Super Shelving - go-live checklist

Tick items off as you go. Items marked **(Claude)** are things Claude can do in the theme. Everything else needs you.

This is a planning list, not legal or tax advice - confirm the business, GST and insurance items with an accountant / the relevant government site.

Last updated: 2026-10-15

Already done

- [x] ABN (35 812 490 397) - it's shown in the site footer
- [x] Website theme built, tested and pushed to the live theme "Super Shelving - Build"
- [x] Logo and favicon (header, footer, browser tab)
- [x] Shopify pages created and linked in the footer: Returns, Delivery, Warranty, Terms of Service, Privacy, Assembly Instructions, Purchasing Guide, Share Your Experience, FAQs, About Us, Contact, How To Collect In Your Vehicle
- [x] Footer menus (shop, support, information, policies) and footer details (ABN, address, phone, email)
- [x] Policies written in the theme style, including the 2-year warranty wording across the site
- [x] Steel shelving assembly PDF uploaded
- [x] Share Your Experience gallery photos 1-3
- [x] Star-rating display on collection cards and product pages (the numbers are still placeholders - see Phase 5)

Phase 1 - Business foundations (do these first, order matters)

- [ ] **Check the name is available**: search ASIC business names, IP Australia trade marks (classes 20 shelving/furniture and 35 retail) and Google. Do this *before* spending more on branding.
- [ ] **Register the business name "Super Shelving"** with ASIC (you already have ABN 35 812 490 397; the business name is registered separately and linked to the ABN).
- [ ] **Decide on a trade mark** for the name / logo (optional but worth considering; filed with IP Australia, fee is per class).
- [ ] **Decide on GST**: your policy pages say prices are GST inclusive. You can only charge GST if you are registered for GST (compulsory at $75,000 annual turnover, optional below). Either register for GST before launch or change the wording on the policies and product pages.
- [ ] **Business bank account** (separate from personal) for Shopify payouts. The account name should match the ABN / business name that Shopify Payments verifies.
- [ ] **Insurance**: public liability and product liability (you sell load-bearing shelving - this matters). Ask the insurer about covering delivered/assembled products.

- [ ] **Business email** on your own domain (for example hello@yourdomain.com.au) - the footer currently shows a personal live.com.au address.
- [ ] **Business phone number** you are happy to publish (footer currently uses +61 431 533 520 - confirm that is the number you want public).
- [ ] **Register the domain** (a .com.au needs the business name to match, so register the business name first). Reserve the matching social handles.
- [ ] **Supplier paperwork**: written confirmation of the 2-year warranty backing from your supplier, who handles replacement parts, lead times and stock levels, and test reports/spec sheets that support the load ratings you quote (125 kg / 625 kg etc.).
- [ ] **Accountant / bookkeeping set up** (Xero/MYOB or similar, connected to Shopify and the bank feed).

Phase 2 - Shopify account setup

- [ ] Choose and start a **paid Shopify plan** (the trial/dev store cannot take real orders).
- [ ] **Shopify Payments**: complete identity + business verification (ABN, bank account for payouts, ID). This can take a few days.
- [ ] **Afterpay** (mentioned in the policies): check whether it can be switched on inside Shopify Payments or needs a separate Afterpay application, and apply early. Remove any Afterpay mention if you will not offer it at launch.
- [ ] **PayPal** (optional): connect if wanted.
- [ ] **Store details** (Settings > Store details): legal business name, trading name, address, store email, phone, time zone, currency AUD, units (metric).
- [ ] **Taxes**: set prices as tax-inclusive, enter your GST registration, and test one order to confirm GST is shown correctly on the receipt.
- [ ] **Shipping** (Settings > Shipping and delivery): rates / zones that match the Delivery Policy page (Victoria-wide delivery, pickup, any freight surcharge, large-item/pallet freight quotes). Every product needs a correct weight and dimensions for rates to work.
- [ ] **Local pickup** location set up if you offer pickup (the policies and the "How to collect in your vehicle" guide assume you do).
- [ ] **Policies in Shopify** (Settings > Policies): paste the Returns, Delivery (shipping), Terms of Service and Privacy policies in here too. Checkout shows these links, and they must say the same thing as the website pages. **(Claude can prepare the text.)**
- [ ] **Customer accounts**: confirm they are on (the Privacy Policy says accounts exist).
- [ ] **Notification emails** (Settings > Notifications): order confirmation, shipping confirmation, refund, etc. - check the wording, logo, business name and contact email.
- [ ] **Staff accounts / 2-step verification** on the owner login.
- [ ] **Checkout**: add the logo, brand colours and any required legal links.
- [ ] **Marketing consent**: only email people who have opted in (Spam Act). Set up the sign-up form wording if you add one.

Phase 3 - Pages and content

- [ ] **Footer contact details**: swap in the business email and confirm the phone number you want public (ABN and address are already in).
- [ ] **FAQs page**: the returns/warranty/delivery answers still contain wording from the old reference site. Rewrite them to match the final policies. **(Claude)**
- [ ] **Privacy Policy**: decide whether to restore the Complaints / OAIC section (your edited version doesn't have it). **(Claude)**
- [ ] **About Us**: all claims true (local warehouse, years trading, number of customers).
- [ ] **Assembly Instructions**: PDFs/videos for MDF shelving and workbenches (the steel shelving PDF is already in).
- [ ] **Share Your Experience**: Google Form link for photo uploads, photos for gallery slots 4-6, and the "customers served" style stats must be real numbers.
- [ ] **Photos**: every remaining placeholder image replaced (hero, category cards, products, about page); alt text on images.
- [ ] **Proofread everything**: spelling, prices, measurements, load ratings, "2 year" warranty wording, phone/email, delivery times.

Phase 4 - Products

- [ ] All products created with final titles, descriptions, specifications, dimensions and load ratings (every number double-checked against the supplier sheet).
- [ ] Prices, compare-at prices (the "was" price must be a real previous price), SKUs, barcodes if you have them, weights.
- [ ] Inventory tracking on, stock counts correct, "continue selling when out of stock" set the way you want.
- [ ] Collections (Steel Shelving, Steel Workbenches, MDF Shelving, All Products), tags and sort order.
- [ ] Variants (size/colour) and the quick-add button behave correctly.
- [ ] Product images: at least 4-6 per product, consistent size, a real photo of the assembled product where possible.
- [ ] Product page "fine tuning" pass **(Claude)**: layout, spec table, delivery estimate, warranty/returns blurb, related products.

Phase 5 - Reviews (see the recommendation in chat)

- [ ] Choose a reviews app (Judge.me is my first suggestion), install it, and connect it to the product page. **(Claude: add the app block and match the styling.)**

- [ ] **Remove every placeholder review and fake number before launch.** The theme currently has demo review cards and fixed star settings (4.9 stars / "(22)" reviews on product and collection cards, a Google Reviews section, reviews avatars, "customers" stats). Showing invented reviews or counts is misleading conduct under the Australian Consumer Law. Replace them with real reviews, or hide the section until you have some. **(Claude)**
- [ ] Set up the automatic "how was your order?" review request email (a few days after delivery).
- [ ] Create a **Google Business Profile** (needs a real address / service area) so genuine Google reviews can feed the Google Reviews section later.

Phase 6 - Marketing, SEO and tracking

- [ ] Page titles and meta descriptions for the home page, collections and products. **(Claude can draft them.)**
- [ ] Social share image (the picture shown when the site is shared on Facebook, iMessage, etc.).
- [ ] **Google Search Console** + submit the sitemap; **Google Analytics 4**; **Meta/TikTok pixel** if you advertise.
- [ ] **Google Merchant Center / Google & YouTube app** for free Shopping listings.
- [ ] Cookie / privacy banner if you use tracking (Shopify has a built-in consent banner).
- [ ] **Announcement bar**: "20% OFF STOREWIDE" must be a real discount that is set up in Shopify (discount code or automatic discount). Remove or change it if it is not.
- [ ] Other homepage claims ("Unbeatable Prices", "Local Melbourne Warehouse", "Victoria Wide Delivery", etc.) must all be true on launch day.

Phase 7 - Testing (do not skip)

- [ ] **Place real test orders**: one pickup, one delivery, one Afterpay/PayPal if enabled; then refund them. Check the emails, GST, shipping cost and your admin notifications.
- [ ] Test on iPhone Safari, Android Chrome, desktop Chrome, Safari and Edge, including the cart, quick add, filters, list/grid view and every form (Contact, Share Your Experience).
- [ ] Contact form and Share Your Experience form actually deliver to your inbox.
- [ ] Page speed check (images compressed, nothing huge). **(Claude)**
- [ ] Open every link in the footer and every policy; check there are no 404s.
- [ ] Accessibility basics (contrast, alt text, keyboard navigation). **(Claude)**

Phase 8 - Operations (before the first real order arrives)

- [ ] **Packaging** and a courier / freight account (Australia Post, couriers, pallet freight for big items) with quotes for large orders.

- [ ] How orders are **picked, packed and collected**; who is at the warehouse for pickups and when (opening hours on the site).
- [ ] **Returns address** and process; the 14-day change-of-mind steps in your Returns Policy are workable in practice.
- [ ] **Customer service**: inbox set up, a standard reply for common questions, and a realistic response time (the policies deliberately don't promise one).
- [ ] **Damaged / faulty goods** process: photo request, supplier claim, replacement stock.
- [ ] **Record keeping**: invoices, GST (BAS), supplier invoices, ABN/tax obligations for a sole trader.

Launch day

- [ ] Connect the domain in Shopify and set it as primary (SSL is automatic).
- [ ] **Remove the storefront password** (Online Store > Preferences).
- [ ] Publish the final theme and confirm it is the live one.
- [ ] Place one last real order yourself and refund it.
- [ ] Switch on ads / announce only after the order flow works end to end.
- [ ] Add the Shopify admin app and order notifications to your phone.

After launch (first 30 days)

- [ ] Check orders, emails and payouts daily for the first week.
- [ ] Ask early customers for reviews; add their photos to Share Your Experience (with permission).
- [ ] Review Search Console and Analytics; fix anything broken.
- [ ] Revisit the warranty, uncollected-order fee and restocking-fee wording with a lawyer if you want certainty - those are the policy items with the most legal risk.
